Location: Hyderabad, Sindh, Pakistan (Remote Ready)

PROFESSIONAL SUMMARY

Highly motivated and tech-savvy professional specializing in generative AI workflows, prompt engineering, and digital business solutions. Recently completed the comprehensive, 7-course **Google AI Professional Certificate**, mastering cutting-edge competencies across 20+ practical AI projects. Adept at leveraging advanced AI frameworks to streamline business data, optimize operational workflows, and generate premium content assets. Eager to bring technical AI fluency, robust problem-solving capabilities, and a remote-ready professional mindset to an entry-level AI Specialist, Content Coordinator, or Data/Operations Analyst role.

CORE TECH & AI SKILLS

- Generative AI & Prompting:** Advanced Prompt Engineering, Multi-turn Conversational Design, AI Output Critiquing & Refinement, Context Window Optimization.
- AI Business Solutions:** No-Code App Prototyping ("Vibe Coding"), Workflow Automation, Data Transformation & Predictive Structuring.
- Content & Research:** AI-Assisted Technical Writing, Automated Market Research, Strategic Synthesizing of Unstructured Datasets (NotebookLM).
- Operations & Productivity:** Team Coordination, Cross-Functional Project Mapping, Agile Strategy Assets, Digital Workspace Customization.

CERTIFICATIONS & EDUCATION

Google AI Professional Certificate

Completed: June 2026

Issued by Google via Coursera (Credential ID: RXSK74HO93QZ)

- Completed an intensive 7-part curriculum covering AI Fundamentals, Brainstorming & Planning, Research & Insights, Writing & Communicating, Content Creation, Data Analysis, and App Building.
- Successfully built a professional portfolio of over 20+ practical artifacts translating natural language instructions into functional workspace environments.
- Demonstrated command over responsible AI implementation, bias mitigation, and tool constraint evaluation to address real-world business challenges.

University of Sindh

Ongoing

BS / Certification Candidate — Artificial Intelligence & Technology Track

| PRACTICAL AI PROJECT PORTFOLIO

AI-Driven Business Intelligence & Data Transformation

- Utilized generative AI tools to clean, restructure, and map messy, unstructured transactional data into normalized databases.
- Translated intricate natural language prompts into advanced analytical formulas to extract key business insights, performance trends, and automated summary reports.

No-Code Application Prototyping ("Vibe Coding")

- Designed, built, and iteratively updated functional application prototypes using purely text-to-code prompt architectures.
- Diagnosed code syntax anomalies and deployed targeted AI-guided debugging frameworks to verify multi-platform tool stability and execution logic.

Advanced Content Generation & High-Impact Market Research

- Formulated multi-turn prompt matrix configurations to generate high-fidelity technical documentation, target-audience marketing frameworks, and specialized corporate briefs.
- Deployed tailored AI knowledge structures to parse complex research documents, synthesize extensive digital recordings, and accurately evaluate cross-functional project risks.

| KEY COMPETENCIES & PROFESSIONAL ATTRIBUTES

- **Remote Team Fluency:** Thoroughly prepared for independent, asynchronous workflows, active progress logging, and digital workspace synergy.
- **Analytical Thinking:** Strong conceptual agility to take abstract operational goals and map them into concrete, executable technical milestones.
- **Rapid Technical Adaptability:** Innate capacity to quickly adopt, evaluate, and scale newly emerging digital platforms, software variations, and LLM updates.
